

## COBRA TRAINING OPERATIONS

00;00 – 00;14 Opening Slate (with music throughout video story)

00;15 – 00;21 Students looking at testing machine, machine shows positive reading for anthrax  
Student one: "Positive" Student two: "Positive...we've got red...positive for anthrax" Student one:  
"we've got anthrax...anthrax."

00;22 – 00;33 Multiple shots of students performing different tests on different surfaces to identify harmful agents. No narration.

00;34 – 00;54 Soundbite: Sean Feran, Firefighter, Denver, Colo.  
"Before I came here I didn't really realize that this training was available, having been here and realizing that the number of people that have actually taken it, it really increases that feeling of preparedness. That we're actually ready for things when they happen as opposed to just hoping that maybe a couple people might know it. There are actually thousands of people that have been through here."

00;55 – 01;04 Students performing more tests, machine shows positive test for Ricin  
Student one: "Positive...ricin positive" Group of students: "Wohooo" Student one: "It is ricin."

01;05 – 01;20 Soundbite: Josh Henson, Arizona Highway Patrol, Hazardous Materials  
"This makes it more realistic to where if I did go into somebodys restaurant, I still have to search for the material, I still have to try and find where this stuff sat and I have to then take a sample. It just gives more of a real feeling."

01;21 – 01;33 Students leaving the scene. Hear undecipherable radio chatter.  
Student: "Evacuate!"

01;34 – 01;49 Soundbite: Shane Coulston, Lieutenant-Paramedic, Fort Worth, Texas  
"Cause you can't get it anywhere, you can't do biological training, you can't get VX at your fire department, you can't get sarin gas at your fire department, you have to do that kind of stuff here. If you didn't get that, this opportunity wasn't available, fire departments, police, whoever, would never get the opportunity to train in that area."

01;50 – 01;57 : Josh Henson, Arizona Highway Patrol, Hazardous Materials  
"We actually got to see the product and how the meters and the different tests respond to the actual live product opposed to the samples that we usually test with."

01;58 – 02;27 Students performing various tests on different surfaces. No narration.

02;28 – 02;35 Soundbite: Sean Feran, Firefighter, Denver, Colo.  
"And it is also important that we have somewhere to send people where there is uniform training so we can all learn the same things."

02;36 – 02;46 Soundbite: : Josh Henson, Arizona Highway Patrol, Hazardous Materials  
"We go on lots of calls that aren't as serious as this training but when you get that call that is as bad as this, it's nice to have the confidence and say hey, I've been in this before this equipment helps me out, we will be okay."

02:47 – 02:51 Undecipherable talking amongst the students. Alarms going off. Students performing biological tests.

02:52 – 03:05 Two students standing in a dark bay planning out their next move. Lights flashing. Narration and video fade out to just music and black screen.

Student one: “Come up with some sort of dispersal device.” Student two: “Okay” Student one: “So you said those containers are often giving off high EOC levels...”

03:06 – 03:17 Closing Slate
